

PRODUCT SHEET

Veeva QualityOne

Veeva QualityOne brings together QA, QC, food safety and training on a unified cloud platform to enable efficient quality management.

Quality applications exist on a single validated platform, allowing for the consolidation of quality processes that have been traditionally managed in siloed, disparate systems.

Veeva QualityDocs is the industry-leading GxP quality and non-GxP quality content management application.

Veeva QMS manages and tracks quality and food safety processes such as non-conformances, complaints, CAPAs, change controls, audits, risk management, and SQM.

Veeva HACCP streamlines HACCP management and integrates with Veeva QMS to ease compliance, improve visibility, and provide control over critical risks.

Veeva Training is a compliance-optimized learning management system that lets organizations manage role-based training from content to full curricula using automated workflows in a single system.

Veeva LearnGxP is an eLearning library of accredited courses and microlearning videos to help organizations meet regulatory requirements and drive personnel development.

Veeva LIMS facilitates quality control activities for manufacturing by unifying QC data management and test execution processes within a single, cloud application.

Veeva Batch Release aggregates data and content from QMS, LIMS, ERP, and regulatory systems to facilitate GMP release and market-ship decisions.

Veeva Validation Management digitizes and manages the end-to-end validation lifecycle, providing a paperless environment for protocol authoring, execution, and final reporting.

Veeva Station Manager is a simple tablet-based application that ensures the right content is available 24/7 for consumers on the manufacturing floor.

Veeva Validation Management	2021	Mature	11 - 50
Veeva Station Manager	2018	Mature	11 - 50

PRODUCT SHEET

Veeva QualityDocs

QualityDocs is an end-to-end content management solution for both regulated and non-regulated quality content. Veeva’s proprietary GxP content reference model enables best practices and industry standardization. The application manages content throughout its entire lifecycle, including embedded Office365 connectivity, workflow automation, and deep and efficient search capabilities. It allows internal and external parties to collaborate and share information, such as procedures, policies, work instructions, quality agreements, and batch-related documentation, in a controlled manner directly within the system.

Platform	Veeva Vault
Integrations	Lives with QMS, HACCP, Training, Validation Management, Batch Release, Station Manager Connected with LearnGxP and LIMS

PRODUCT SHEET

Veeva QMS

QMS is a cloud-based application designed to manage quality processes for regulated industries. It provides faster time to value with streamlined processes for handling complaints, non-conformances, CAPAs, audits, risk management, supplier quality management, and change control. External partners can be granted secure and specific access to collaborate on investigations, audit findings, corrective actions, and more.

QMS is unified with other QualityOne applications, driving continuous improvement and enabling organizations to deliver trusted products to their customers and consumers. Additionally, QMS, Batch Release, and LIMS bring together quality assurance and quality control processes in one platform.

PRODUCT SHEET

Veeva HACCP

HACCP centralizes hazard and risk information in a structured manner to simplify Hazard Analysis and Critical Control Point (HACCP) plan management at scale. The cloud-based solution allows companies to create, manage, and standardize HACCP plans across facilities and geographies, ensuring visibility and consistency. Integrated flow diagrams help ensure effective control measures and provide a user-friendly interface for performing hazard analyses and identifying controls.

HACCP is unified with QMS and QualityDocs, linking risk inputs like quality events or supplier audits and controlled documents to HACCP plans. This seamless flow of data enables continuous improvement and controlled change management.

PRODUCT SHEET

Veeva Training

Training is a learning management system (LMS) designed to ensure training compliance, qualification, and job readiness. It gives customers tools to manage learning content and training matrices, and to deliver and track assignments. Training administrators can build curricula with many training types, including documents, videos, eLearning, classroom training, on-the-job training, assessments and more. Managers can track qualification and compliance status using reports and dashboards.

Training is integrated with QualityDocs, ensuring access to source content and automating version updates and re-training based on changes and business rules. Document and training data are easily combined for reporting, and training can be assigned in QMS workflows.

PRODUCT SHEET

Veeva LearnGxP

LearnGxP is an accredited training library that can be deployed with Veeva Training or other learning management systems. The library contains interactive eLearning content and microlearning videos on topics such as the Fundamentals of Good Manufacturing Practices, Data Integrity, and Inspection Readiness. It is designed to help regulated companies meet GxP compliance requirements and provide professional development on industry-specific topics to their workforce.

PRODUCT SHEET

Veeva LIMS

LIMS optimizes batch release testing and stability study management for the quality control lab. It drives detailed sample management, digital test method execution, specification adherence, and review by exception to accelerate the release of product.

LIMS promotes compliance by verifying user qualifications from Training, displaying effective test method procedures from QualityDocs, and initiating lab investigations directly in QMS from out-of-specification (OOS) results.

Announced	2021

Integrations	Connected with QualityDocs, QMS, HACCP, Training, Validation Management, Batch Release

PRODUCT SHEET

Veeva Batch Release

Batch Release is an end-to-end solution that automates aggregation, reviews, and traceability of batch-related data and content to enable faster, more confident GMP release and market-ship decisions.

Batch Release brings together data and content from QualityDocs, QMS, LIMS, ERP, and MES to simplify collaboration and decision making. It is tightly integrated with and requires QMS and QualityDocs. When used with LIMS, it offers faster time to value, but can be implemented with third party solutions to centralize all batch release data.

PRODUCT SHEET

Veeva Validation Management

Validation Management is a digital solution for faster, accurate validation. It streamlines commissioning, qualification, and validation activities across computerized systems, facilities, utilities, equipment, methods, and processes. It facilitates the tracking of system inventory, the management of requirements, and oversight of project deliverables. Validation activities can be easily created and approved, test scripts executed digitally, and traceability and summary reports generated automatically.

Validation Management is unified with QualityDocs and QMS to connect quality events and key artifacts.

PRODUCT SHEET

Veeva Station Manager

Station Manager is a tablet-based application that provides manufacturing operators access to content from QualityDocs. Station Manager syncs with QualityDocs when internet connectivity is available to ensure the latest versions of content are accessible even when offline. Station Manager surfaces only the relevant work instructions and procedures for a specific station in manufacturing to ensure operators readily have access to the content they need.
