

Helping Chemical Manufacturers Unify Quality

Veeva QualityOne enables efficient quality management for QA, QC & training across GxP and non GxP operations. By modernizing systems and simplifying quality processes in a single platform, manufacturers can deliver high quality products that customers and consumers trust.

Traditional quality silos and legacy systems limit speed to market and streamlined, consistent operations. Site-specific processes, manual workflows and disconnected systems reduce efficiencies, create inconsistencies in execution, increase training burdens, and constrain collaboration.

Increase Speed to Market | Scale | Create Efficiency | Ensure Compliance

Veeva QualityOne unifies QA, QC and training in one platform to accelerate quality processes, create efficiencies, and ensure consistent compliance across sites, partners and global teams. With built-in automation, best practices, and data for analytics and AI, it is the foundation for proactive quality management.

The platform unifies applications which can be used independently or together: quality management system (QMS), documented content management, training (LMS), lab management (LIMS) and batch release.

Transforming the chemicals value chain

15 legacy systems consolidated and integrated

BASF

30% Reduction in Quality Incidents

Unilever

Enabled 60% of deviations to be closed on a 'fast-track' basis

Sanofi

Capabilities

✓ Remove operational silos

Reduce cycle times, modernize processes and consolidate legacy applications by connecting and managing all quality processes, content, events and data in a unified cloud platform.

✓ Create efficiency and ensure compliance

Ensure consistent, efficient and compliant quality operations across sites— including CAPAs, non-conformances, change control, complaint handling, supplier management, lab investigations, training, and more.

✓ Drive deeper collaboration across the value chain

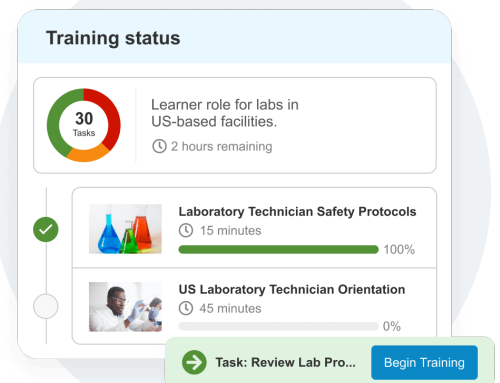

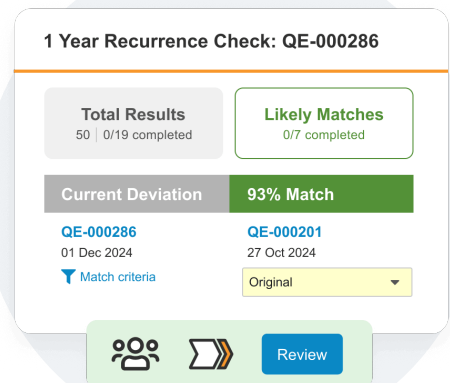

Improve communications, data visibility and partner collaboration with external documents and actions, SCARs, supplier change notifications and more.

✓ Build a data foundation for analytics, automation, and AI

Make timely decisions, optimize metrics and drive proactive quality with a standardized data foundation for advanced analytics, automation, and Veeva AI.

✓ Maintain competency-based training

Empower your workforce with an efficient end-to-end training management solution for role based job qualification, compliance and audit readiness.

About Veeva QualityOne

Veeva QualityOne helps manufacturers deliver high quality products that consumers trust. The cloud-based platform unifies applications, processes and partners across content management, Quality Management System (QMS), and training.
